Subject: [External] Docket #2020-229-E

As citizens of SC, advocates of climate protection, and owners of solar power generating equipment on our farm, we encourage you to reject any efforts from Dominion Energy to discourage the installation of solar panels that are linked to their grid. Rather, we need to incentivize clean energy production in a way that allows companies like Dominion to maintain their grid for distribution but also to receive power from customers without penalizing their efforts to diminish the effects of power produced from sources that pollute and increase global warming.
